

# Markdown → PDF & DOCX Converter

A professional offline Chrome extension that transforms Markdown into polished PDF and editable DOCX documents.

**No backend, fully offline, premium via Chrome Web Store.**

[Features](#) • [Installation](#) • [Usage](#) • [Premium](#) • [Examples](#) • [Contributing](#)

## Features

- **GitHub Flavored Markdown** – headings, lists, tables, blockquotes, code blocks
- **Live math rendering** with KaTeX – inline  $E = mc^2$  and display-mode

$$\int_0^{\infty}$$

- **Mermaid diagrams** – flowcharts, sequence diagrams, graphs – rendered as sharp SVGs
- **Syntax highlighting** for code blocks (Python, JavaScript, Java, C++, Bash, etc.)
- **10 professional fonts** – Inter, Roboto, JetBrains Mono, and more
- **PDF export** – uses browser print engine for vector-quality output (A4 / Letter)
- **DOCX export** (premium) – fully editable Word documents with embedded SVGs and tables
- **100% offline** – all processing happens locally, no data leaves your machine
- **Clean, icon-driven UI** – minimal text, easy to use for non-technical audiences
- **Premium via Chrome Web Store** – one-time purchase, verified by Google sign-in, no ads ever

## Installation

Quick start (for users)

- 1.
2. Pin the extension to your toolbar.
3. Paste Markdown → choose a font → click **Export PDF** (free).  
To unlock DOCX, purchase the premium license.

## Build from source (for developers)

```
git clone https://github.com/Danyalkhattak/markdown-converter.git
cd markdown-converter
npm install
node setup.js # downloads all required libraries into extension/libs/
```

Then load the extension folder as an **unpacked extension** in Chrome:

1. Go to `chrome://extensions`
2. Enable **Developer mode**
3. Click **Load unpacked** and select the extension folder

---

## Usage

1. Click the extension icon in the toolbar.
2. Paste your Markdown (or click the selection button to grab text from the current page).
3. Choose a font from the dropdown.
4. Click **PDF** to export a document that opens in a new tab and auto-triggers print.
5. (Premium) Click **DOCX** to download a fully editable .docx file.

**Settings** (gear icon) allow you to:

- Change the default font and export format
  - Switch code theme (light/dark)
  - Toggle Mermaid diagram and KaTeX math rendering
-

# Premium (No Ads, DOCX Unlock)

The extension is **free for PDF export**, forever.  
DOCX export is a **one-time premium purchase** via the Chrome Web Store.

## How it works

- 1. Click **“Sign in with Google”** in the popup.
- 2. Authorise the extension to verify your Web Store license.
- 3. If you’ve purchased the premium item, the extension instantly unlocks DOCX and removes all upgrade prompts.

No subscription, no account creation – just a single, secure purchase tied to your Google account.

## Supported Markdown Features

| Feature           | PDF             | DOCX                   |
|-------------------|-----------------|------------------------|
| Headings          | ✓               | ✓                      |
| Bold / Italic     | ✓               | ✓                      |
| Lists             | ✓               | ✓                      |
| Tables            | ✓               | ✓ (native Word tables) |
| Code blocks       | ✓ (highlighted) | ✓ (monospaced)         |
| Blockquotes       | ✓               | ✓                      |
| Inline math ...   | ✓ (KaTeX)       | fallback text          |
| Block math<br>... | ✓ (KaTeX)       | fallback text          |

| Feature          | PDF     | DOCX             |
|------------------|---------|------------------|
| Mermaid diagrams | ✓ (SVG) | ✓ (embedded SVG) |

## Examples

### Mermaid Flowchart

Renders as a sharp vector graphic in both PDF and DOCX.

LaTeX / KaTeX

Inline: The mass–energy equivalence formula is  $E = mc^2$ .

Display:

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

All math is rendered using KaTeX – no server required.

## Markdown Table

| Language   | Speed | Popularity |
|------------|-------|------------|
| Python     | Fast  | Very high  |
| Rust       | Fast  | Growing    |
| JavaScript | Fast  | Very high  |

Tables become real Word tables in DOCX, not images.

---

## Contributing

---

We welcome improvements, bug fixes, and new feature ideas.

Here's how to contribute:

1. **Fork** the repository.
2. Create a new branch: `git checkout -b feature/amazing-feature`
3. Make your changes (keep the code clean and well-commented).
4. Test locally: load the extension folder as an unpacked extension.
5. Commit and push: `git commit -m "Add amazing feature"`

6. Open a **Pull Request** describing what you've done and why.

## Development guidelines

- The extension is written in plain JavaScript, HTML, and CSS – no build step.
  - All third-party libraries are downloaded via `setup.js` into `extension/libs/` (do not commit them).
  - The "key" field in `manifest.json` should only be used for local development and **never** committed to the public repository (we maintain a separate `manifest.dev.json` for that).
  - UI changes must remain icon-based and minimal; avoid adding emojis or long text.
- 

## FAQ

---

### Why does DOCX require premium?

Developing and maintaining a high-quality DOCX generator takes time. A one-time purchase supports continued development and keeps the PDF export free for everyone.

### Is my data safe?

Absolutely. All Markdown, diagrams, and math are rendered entirely inside your browser. No data is ever sent to any server.

### Can I use this without an internet connection?

Yes. After the initial installation (which bundles all libraries), the extension works completely offline.

---

## License

---

This project is licensed under the [MIT License](#).

Premium features are unlocked via a legitimate Chrome Web Store purchase.
